

TOP TIPS

How to save energy on electronic appliances

Keep your fridge between 3-5 degrees. If it has a power saving setting use it

Clean the coils behind the fridge as it will make the fridge run better and save you money

If you have a kitchen and bathroom fan, make sure you turn it off straight away after using it

Match your pot to the right ring size

Use a Microwave or Toaster to warm up left over food as a cooker uses more energy

TOP TIPS

How to save energy on electronic appliances

Don't keep opening the door when you are cooking. Every time you open the door when cooking the heat can drop by about 25 degrees

Buy a voltmeter, these are devices which tell you how much energy you are using

Copper pots and pans are better than steel ones when cooking on the stove

Make sure you wash a full load of clothes. Smaller and more frequent loads will cost you more in the long run

If you have a dishwasher, put it on eco mode

TOP TIPS

How to save energy on electronic appliances

If you are buying a new television, look out for energy STAR-qualified TV's as these are better than the non-starred tvs

If your TV screen or Computer screen has an energy saving mode - use it!

Set your computer to sleep mode as this is more energy efficient than standby

If you have a games console put it on the energy saving setting - most of them do have one

Use a tablet or smartphone as much as possible as these devices use less energy than a computer

TOP TIPS

How to save energy on electronic appliances

If you are buying a new computer, get a laptop as these use less energy than a desktop

Make sure your printer is turned off at the mains when it is not being used

Turn the Computer off at the mains when not in use

Unplug all charges as they continue to use electricity even when nothing is plugged in
